New Connecto® A15-class grating

Building

NEW

Nicoll has released an innovative new range of high-performance, practical and attractive PVC gratings. Our new A15-class grating has been redesigned to fit seamlessly into your surroundings.

Advantages:

- High absorption capacity
- Complies with requirements for people
 - with reduced mobility
- Resistant to corrosion
- Controlled expansion of the grating
- Lockable

PVC GRATINGS FOR CAN177, CAB773 AND CABS773					
		LIGHT GREY VERSION	SAND VERSION	DARK GREY Version	PACK.
4444444444444	0.5 m A15-class grating with high absorption capacity	GRL77	GRL77S	GRL77K*	12

* The GRL77K has a high solar radiation absorption coefficient.

To extend the product's lifetime, Nicoll requires dark grey GRL77K-class gratings to be screwed to the gutter body with the FIXCAN attachment system.

The new GRL77 grating is used to collect stormwater. It is primarily designed for use in locations where A15-class load resistance is required as a minimum (areas for pedestrians and cyclists), such as terraces, garden paths, parks, swimming pools, play areas and so on.

Durable: The grating is resistant to chemical agents (chlorine, salt, soap, etc.) and corrosion. The anti-UV treated PVC material retains its colour over time.

Modern design: The new grating is available in grey, sand and dark grey versions, so it fits seamlessly into different projects.

Lockable: All you need to lock the grating are two FIXCAN fastening kits (optional).

Attractive finish: The cover plates deliver a genuinely attractive finish.

TECHNICAL CHARACTERISTICS

Anti-UV treated PVC grating A15 load class (NF EN 1433)

Complies with requirements for people with reduced mobility Absorption surface area: 490 cm² / ml

DID YOU KNOW?

the gratings to expand.

Be careful not to use misleading statements such as «light traffic» or «suitable for car loads» without specifying the class. These statements have no regulatory value. You or your customer may be held liable.

Controlled expansion of the grating: The positioning

brackets ensure that the grating is correctly fitted into

the drainage channel, leaving sufficient space to allow
